DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 6, 9-11 and 15-19 are rejected under 35 U.S.C. 102(e) as being anticipated by US006888608B2 (608)

Per claim 1, 608 teaches a method of fabricating a liquid crystal display device, comprising: preparing first and second substrates having an active area [display area] and a dummy area [off-display area]; forming at least one first column spacer on the active area on the second substrate [spacers 33 formed in display area]; forming at least one second column spacer in the dummy area on the second substrate [spacers 33 formed in off-display area]; forming a sealant in a periphery of the active area of the second substrate [seal 37, periphery being that area outside and surrounding the display area]; and bonding the first and second substrates to each other [see figure 1] and wherein forming comprises dispensing a liquid crystal on one of the first and second substrate [inherent, since if it is injected, it is still dispensed on one of the first and second substrate].

Per claim 6, 868 teaches the method of claim 1, further comprising forming at least one third column spacer outside the active area of the second substrate [spacer 33 in off-display area]

Per claims 9-10, 868 teaches the method of claim 1, further comprising forming a liquid crystal layer between the first and second substrates [LC 40].

Per claim 11, 868 teaches the method of claim 1, further comprising forming a sliver pattern in a periphery of the active area of the first substrate [the sliver paste, see column 1, lines 55-63].

Per claim 15, 868 teaches the method of claim 1, wherein the first column spacer is formed on the wiring part of the first substrate [see figure 1 and gate 12].

Per claim 16 and 17, 868 teaches the method of claim 1, further comprising: forming a black matrix [36] and a color filter layer [32] on the second substrate; and forming an overcoat layer on the color filter layer [34].

Claim 18 is inherent.

Per claim 19, 608 teaches the step of forming a dummy color filter layer on the periphery of the active area of the second substrate [the spacers 33 are formed from color filters.]

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 2-5, 7-8 and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over 608.

Per claims 2-3, 5 and 8 608 teaches the method of claim 1, but lacks the sealant formed of an organic photo-hardening sealant. However, it was well known to use mixtures of organic photo and thermo hardening seals to ensure a tight seal. Accordingly it would have been obvious to one of ordinary skill at the time of invention to combine the well known photo/thermo seal with 608.

Application/Control Number: 10/779,842

Art Unit: 2871

Per claims 4 and 7, 608 teaches the method of claim 1, but lacks the first and second column spacers are about 5 to 30 microns in width. However it was a matter of design when choosing the width. If the width is smaller, then the aperture increase and more light will pass. But the space accuracy will decrease. On the other hand, if the width is increased less light will pass, but the space accuracy will increase. It would have been obvious to one of ordinary skill at the time of invention to choose a width between 5 and 30 microns.

Per claim 12, 608 teaches the method of claim 1, but lacks the steps of bonding the first and second substrates to each other includes: loading the second substrate on an upper stage of a bonding machine to face into the first substrate; loading the first substrate on a lower stage of the bonding machine; evacuating a chamber of the bonding machine; aligning the first and second substrates; and attaching the first and second substrates to each other. However, if not explicitly taught each of these method step are well known in the art to ensure proper gap spacing and alignment using an efficient method. Accordingly, it would have been obvious to one of ordinary skill at the time of invention.

Per claim 13, 608 teaches the method of claim 12, but lacks the step of venting the chamber to an atmospheric pressure to press the attached substrates by difference between an inner pressure of the bonded substrates and the atmospheric pressure and applying a UV-ray to the attached substrates to harden the sealant. However is was also well known to create a vacuum of at least one atmosphere to apply pressure on the substrates and use UV light to harden the seal to ensure the liquid crystal is seal properly. It would have been obvious to one of ordinary skill at the time of invention.

Conclusion

This is an RCE. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION**IS MADE FINAL even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Application/Control Number: 10/779,842

Art Unit: 2871

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Page 5

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however,

event will the statutory period for reply expire later than SIX MONTHS from the mailing date of

this final action.

Response to Arguments

Regarding the argument addressing the new limitation, see rejection above for

explanation.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to James A. Dudek whose telephone number is 571-272-2290. The

examiner can normally be reached on 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, David Nelms can be reached on 571-272-1787. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866,277-9197 (toll-free).
